LARGE-VOLUME LOADER BUCKETS

PRODUCTS

Large-volume loader buckets provide the same advantages as standard buckets, but owing to their larger volume they are designed for loading materials with lower specific weight, such as arable soil, fertilizers, coal, wood chips, and many others. The optimized edge geometry and large bottom radius provide good penetration capabilities and easy loading and unloading. The result is a larger load capacity and fast work cycles.

Large-volume buckets are available in versions with a smooth edge or a screwed removable lower edge.
