MULTIPURPOSE 4-IN-1 LOADER BUCKETS

PRODUCTS

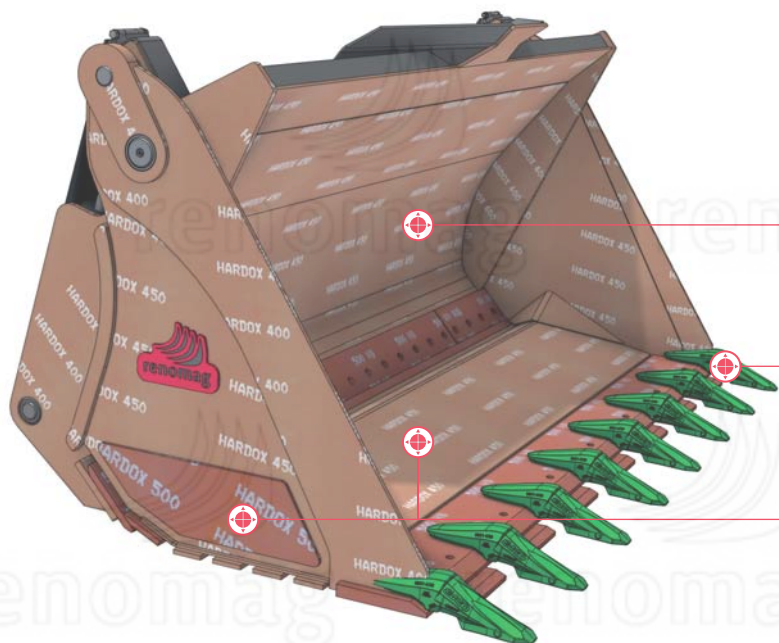

Multipurpose (4-in-1) loader buckets extend the versatility of loaders. Machines equipped with this bucket can be used not only in the usual way, but also for work performed with a edge, a hydraulically operated grab, as well as for quick loading and unloading by opening the rear flap. These buckets are designed for general use in typical conditions for handling easily breakable and less abrasive loose materials. The shape is optimized for maximum rigidity, reliability and great versatility. Multipurpose (4-in-1) buckets are available in versions with a smooth edge, screwed removable lower edge, or fitted with teeth.

New to our range is a reinforced mining version of the 4-in-1 bucket, made entirely of abrasion resistant material with a Hardox In My Body™ certificate.

MULTIPURPOSE 4-IN-1 LOADER BUCKETS

➤ Significantly extends the versatility of loaders.

The shape is optimized for maximum utilization of the machine's power.

The ESCO Ultralok™ teeth system provides optimum loading performance.

Reinforced abrasion-resistant sides and bottom armouring for extended life.

➤ Maximum rigidity, reliability and great versatility.

➤ Minimum number of lubricating points, easy access for servicing.

➤ Can be supplied with additional wear-resistant parts.
