REINFORCED HD EXCAVATOR BUCKETS

PRODUCTS

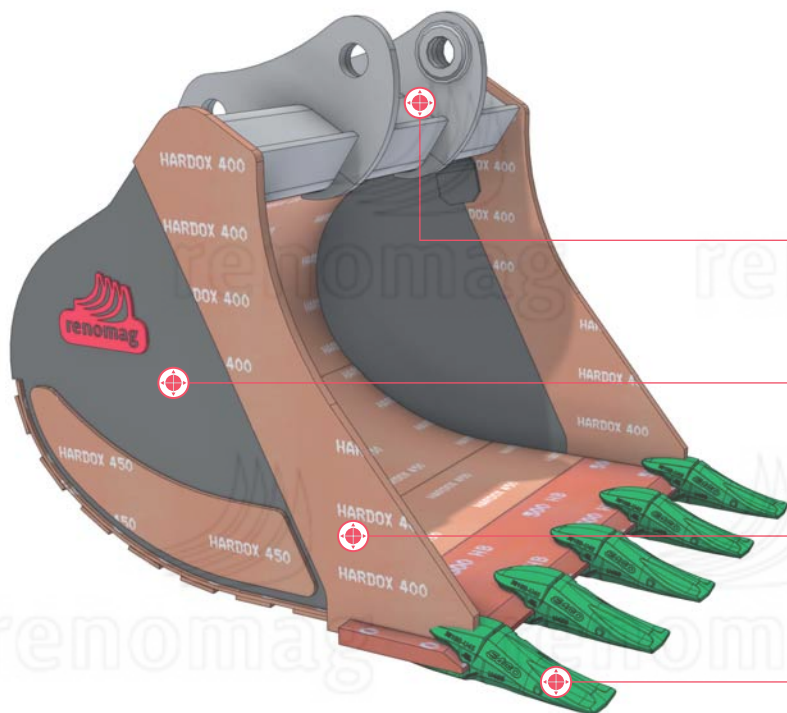

Reinforced HD excavator buckets are universal and highly powerful tools when working in moderately breakable material in workability classes 4 and 5. They are designed for more demanding digging in materials such as compact clay, soil with sand or gravel, broken or weathered granite, slate, marl, building waste and frozen soil. This bucket can be also used for demolition work.

REINFORCED HD EXCAVATOR BUCKETS

MAIN FEATURES AND BENEFITS

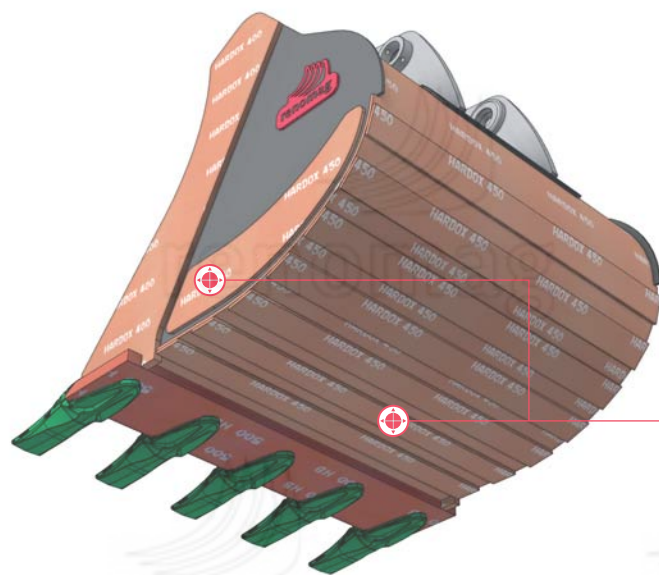

Sturdy suspension construction for high strength and resistance against torsion at the critical points where parts connect..

Deep shape for larger volume combined with a smaller distance between pin and teeth for the best transfer of digging force.

The reinforced sides made from a single piece give the bucket design structural integrity.

The ESCO Ultralok™ teeth system provides optimum digging performance.

+ Can be supplied with additional wear-resistant parts.

Reinforced abrasion-resistant armouring on bottom and lower part of sides.
